3D Obstetrics Policy - Tasmania Imaging

Tasmania Imaging is thrilled to offer 3D obstetric ultrasounds, providing detailed images of your unborn baby. This exciting technology allows for clearer and more lifelike views, enhancing the bonding experience between expectant parents and their little one.

Purpose
This policy establishes guidelines for performing 3D obstetric ultrasounds intended to provide keepsake images and videos of baby, not intended for any diagnostic purposes.

Policy
Guidelines

- Eligibility: All obstetric patients are eligible for the 3D obstetric ultrasound provided they have completed the 20-week morphology diagnostic ultrasound.
- Booking: Appointments must be scheduled within the optimal gestation period of 28-32 weeks.

Session Details

- The cost of a 3D obstetric scan is $120
- Session duration is up to 30 minutes
- You will be provided a minimum of 10 images, a video capture, and a heartbeat recording
- Images will be edited and emailed to you within four days of your appointment. If there are any unexpected delays you will be notified via email.

Cancellation Policy
If you are unable to attend your 3D session you must notify the sonographer within 48 hours of your appointment. A cancellation fee of $50 will be applied for any appointments cancelled without sufficient notice.

Reattempt Policy
There is a small chance that the baby may not be in an optimal position for 3D imaging on the day. If no satisfactory 3D image can be obtained after 30 minutes, a heavily discounted fee of $50 will be required on the day and we will offer a 10-minute reattempt on another day.
If satisfactory 3D images are attained at this reattempt the remaining fee of $70 will be payable.
If we are still unable to obtain a satisfactory image during the reattempt you will not be charged the further $70 and that will conclude this session. You are more than welcome to rebook another 3D session at the standard price of $120.

By proceeding with this session you are in agreement with the above policy.
